RE: Cornhusker Army Ammunition Plant OU1

Contract No.: W9128F-18-D-0020

August 2018 thru October 2018 Analytical Results Summary

Dear Mr. Simpleman:

Attached are summary tables (Attachment 1) of the quarterly sampling analytical results for the period of August 2018 through October 2018 for the Groundwater Treatment Facility (GWTF) at Operable Unit (OU) 1, located in Grand Island, Nebraska. Samples were collected from the total effluent (SP-E1), total influent (SP-S2), granulated activated carbon (GAC) vessels (SP-S6 and SP-S8), and Extraction Well (EW) #7 monitoring points. The sampling was conducted to meet the requirements of the National Pollution Discharge Elimination System (NPDES) Permit, Permit Number NE0131725, and operations and maintenance procedures for the GWTF.

Brice Engineering collected samples for this quarterly sampling event on October 31, 2018. The results verify concentrations for all specified NPDES monitoring parameters are below the NPDES discharge standards and the GWTF is sufficiently treating contaminants of concern prior to discharge. The sampling conducted for this quarter reflect the latest NPDES requirements. We have included a copy of the Daily Chemical Quality Control Report (DCQCR) (Attachment 2) and the NPDES Discharge Monitoring Report (DMR) (Attachment 3) for the period August 2018 through October 2018 for your review.

Also included are summary tables with historical sampling summary table showing data from January 2015 through October 2018 (Attachment 4), and two charts illustrating the historical analytical results from samples collected from EW #7 (Attachment 5).

Please sign the original NPDES forms attached and transmit to Nebraska Department of Environmental Quality.

If you have any questions, please feel free to contact myself or Scotty Mann, Project Manager.

Sincerely,

Gary Carson
